WELLNESS WITHOUT BORDERS JUST IMAGINE

At VRenity, we believe wellness isn't just a luxury — it's a necessity. As pioneers at the intersection of mental wellness, AI, and virtual reality, we're creating immersive solutions that make emotional well-being and meaningful support part of everyday life — an affordable and accessible solution for those who need it most.

HOW AUBURN PD USES VIRTUAL REALITY

VRENITY IN THE NEWS

Q13 Fox News highlighted VRenity's impact on frontline wellness in a segment featuring Angel Ogando, Wellness Program Designer for Auburn PD. He spoke to the growing need for tools that help officers manage repeated exposure to trauma and shared how VRenity offers a new way to decompress — one that has already received positive feedback from those using it.

In another feature, Q13 visited the Pacific Science Center, where VRenity was part of the Sensory Lounge exhibit from June 1 to September 1. CEO Nolie MacDonald shared her observations, noting that children as young as four eagerly engaged with the platform — some interacting with Neuro for up to 40 minutes and excitedly bringing back friends and family to try it. The exhibit provided valuable insight into the platform's wide appeal and strong user engagement.

SURVEY

AUBURN PD PILOT SURVEY

Following their summer pilot, Auburn Police officers completed a survey that showed positive feedback, with many finding VRenity helpful in reducing stress. Suggestions for improvement, including confusion around navigation, have been addressed and are now live through a newly simplified menu designed for ease of use.

VRenity is more than just a VR experience—it's a peaceful escape. From the moment I stepped into the calming lounge area, I felt like I was stepping into another world. Other features including a nature walk, a sound room, and beautifully designed portals helped me to relax and reset. It allowed me to disconnect from my daily stress and decompress. Whether you are looking for stress relief, quiet reflection, or just a break from the noise of life, I can't recommend VRenity enough.

\$14.99 PER MONTH

VRENITY TREEHOUSE RETREAT

VRenity Treehouse Retreat is a calming virtual sanctuary where nature and technology blend to support emotional well-being. With just one button on the right controller, users can access a simplified universal menu to explore guided hikes, meditative sound experiences, and peaceful escapes. A new push-to-talk feature allows easy interaction with our conversational AI, Neuro, who speaks 98 languages. Closed captions are also available for the hearing impaired, making the retreat accessible to all.

\$149.99

VRENITY LITE

VRenity Lite offers the same immersive experiences found in the Treehouse Retreat — including guided hikes, meditative sound experiences, and peaceful escapes — without the conversational AI. Ideal for those who prefer a quiet escape, this affordable version is perfect for break rooms and wellness spaces, bringing moments of calm and clarity into any environment.

THE NEXT FRONTIER WITH AI EMOTIONAL SUPPORT, NEURO

In this episode, host Nolie MacDonald chats with Neuro, an AI emotional support companion inside VRenity, about how AI can transform mental wellness—creating safe, accessible, and engaging tools for emotional well-being.

What's Next at VRenity

Introducing V Coins: A Smarter Way to Unlock More

As we build toward the future of VRenity, we're introducing V Coins, a digital currency that will support upcoming platform enhancements. V Coins will be used to appropriately charge for conversational AI based on usage, allowing for fair and flexible access to advanced features. They'll also serve as currency for unlocking future tools and customizations, giving users more control over how they engage with their wellness journey.

New Guides, New Voices

On the horizon is the ability to select from a variety of AI guide options, each with their own distinct personality, tone, and focus. Whether you prefer a soothing voice, an encouraging coach, or a lighthearted companion, this upcoming feature will let you tailor the tone of your experience to better match your mood or goals.

Your Voice, Your World

Further down the roadmap, we're developing a powerful new feature that will enable users to generate immersive video environments through voice prompts. Want to explore a misty jungle at sunrise or unwind beside an ocean cliff at dusk? Just say the word. This technology will bring real-time, AI-generated scenes to life — creating truly personalized, cinematic escapes that evolve with your intentions.
